RADISHES---SPICY

Radishes Contain Vitamin B-1
And Grow Quickly

Soil should be light, quick and rich to insure rapid growth. Slow growth makes the flavor too strong. Sow as early as ground can be worked, as radishes are very hardy. Make successive sowings up to hot weather. When in the third leaf, thin to give roots plenty of room. Pull promptly when mature. The secret of crisp, delicious radishes is quick growth, prompt picking.

New Champion

★ **BURPEE'S WHITE**. 25 days. Remains crisp and non-pithy for a long time. Exceptional tenderness, mild flavor. When young, roots are nearly round, juicy and sweet with pure white skin and flesh. Best eating stage when ¾ to 1 in. across. Pkt., 25c

ADAPTED FOR YOUR SOIL

HYBRIDS for KENTUCKY

840—Known throughout the South Central Corn Belt areas for bumper yields, this popular pedigree has been further improved to provide maximum ear fill. Excellent root and stand-ability, good pickability, fine quality grain as well as high insect resistance, are typical ex-amples of 840's superiority.

Price\$10.00 Bu., F.O.B. Paducah, Kentucky

85AA—This pedigree was bred to meet the demands of farmers who need an early, fast maturing variety for late planting. The quick tasseling and fast ear setting properties of 85AA make it a sure variety. Uniformity and a loose husk permit easy picking. This popular variety produces a good ear of medium indentation with sufficient foliage to make it an excellent choice for late planting.

Price\$10.00 Bu., F.O.B. Paducah, Kentucky

STULL'S 101Y. Early. Approximate maturity 100 days. 101Y is softer than most hybrids which makes it very desirable for feeding purposes. This hybrid won the Kentucky Corn Derby with 209.6 bushels per acre, which is the state record in Kentucky on a five-acre plot.Bushel \$10.00

STULL'S 100Y. Early. Approximate maturity 110 days. Excellent shuck coverage for re-sistance against insects and diseases; excellent standing ability for clean, fast mechanical picking; long ears, with deep grain for high-quality feed and high shelling percentage. High yields per acre.Bushel \$10.00

STULL'S 500W. A new white hybrid with shorter stalks and lower ears. It is blight resistant which is a very important factor in getting the highest yield of corn possible. We recom-mend that you plant your 1962 crop from 500w and you will certainly be happy at harvest time.Bushel \$10.00

PLANTING DIRECTIONS

When to Plant Your Lawn

The finest lawns are made during the cool months in fall and spring.

PREPARE SOIL WELL:

Spade or plow soil 8 inches deep. Remove rocks, roots, and litter. Where shady, there is frequently moss, showing lack of fertility, acid condition and poor aeration. To correct this apply agricultural limestone (100 lbs. per 1,000 sq. ft.) Add at least one bale of peat moss per 1,000 sq. ft. to sandy or clay soils. Work in well with a potato fork before applying fertilizers. Apply 50 lbs. Milorganite and 25 lbs. of 10-6-4 Verta-green Turf Builder to each 1,000 sq. ft. (50'x20'). Rake in thoroughly, mixing fertilizer with soil and working the surface smooth and level. Soak ground thoroughly.

SEEDING THE LAWN:

Most grasses, except Hulled Bermuda, Merion Blue Grass and Rye Grass Are seeded at the rate of 3-5 lbs. per 1,000 sq. ft. See special seeding rates of individual grasses below. Broadcast seeds evenly by hand or with the use of a seeder. Firm with a roller or drag lightly and smoothly with the back of a rake, and water thoroughly. Do not cover over one-fourth inch.

LAWN MAINTENANCE:

Always keep newly seeded lawns well watered to insure good germination and quick rooting. Make first mowing when grass is 2 inches high setting mower to cut at 2 inches. Feed lawns in March and September with Milorganite organic fertilizer, 30 lbs. per 1,000 sq. ft. In dry weather, water lawns thoroughly with a rotary or oscillating sprinkler, soaking ground to a depth of 4 inches or more.

NEW VARIETIES OF KENTUCKY BLUE GRASS

PARK KENTUCKY BLUEGRASS. This new variety comes up quicker and grows more vigorously than any other blue grass.
